1 Introduction

2 The experimental setup

3 Thank you for your attention

Itemize

- Here you can see an itemization
  - It has items
    - The items are below each other

[Goldbach, 1742] Christian Goldbach. A problem we should try to solve before the ISPN '43 deadline, *Letter to Leonhard Euler*, 1742.

Open Questions

Is every even number the sum of two primes? [1]

The experimental setup

1. Calculate cross section s
2. Enumerate the items
3. Future work of

Enumerate

1. Here you can see an enumeration
2. It has items
3. The items are numbered

$$f(x) = \sum_{i=0}^{\infty} \frac{f^{(i)}(x_0)}{i!}(x - x_0)^i$$

Sinuosoidal fuction

$$f(x) = x_0 + 1$$

Theorems and environments

Proof.

This proof is essentially incorrect. □

[Cinti et al., 2017]

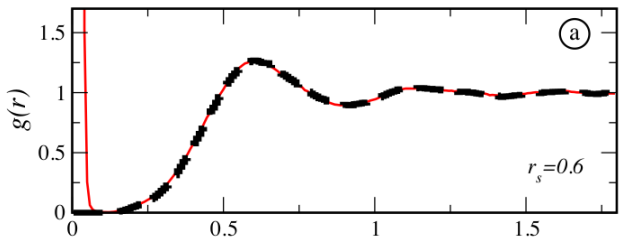

Fig:a Shows the PSF

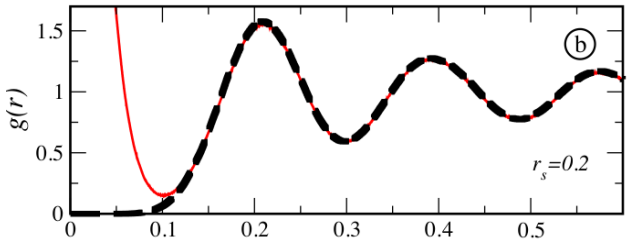

Fig:b Shows the Pc, in here the pair correlation funciton is calculated giving good numbers

Example slide with Title

Solution

Minor nuisance.

Plain frame with title

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

An Algorithm For Finding Prime Numbers.

```
int main (void)
{
std::vector<bool> is_prime (100, true);
for (int i = 2; i < 100; i++)
if (is_prime[i])
{
std::cout << i << " ";
for (int j = i; j < 100; is_prime [j] = false, j+=i);
}
return 0;
}
```

An Algorithm For Finding Prime Numbers.

```
int main (void)
{
std::vector<bool> is_prime (100, true);
for (int i = 2; i < 100; i++)
if (is_prime[i])
{
std::cout << i << " ";
for (int j = i; j < 100; is_prime [j] = false, j+=i);
}
return 0;
}
```

Note the use of `std::`.

hola

hola

hey
